

Dispensing from a Dispense Request

This tip sheet outlines how to dispense a dose of Immunoglobulin (Ig) in BloodNet directly from a dispense request. All Ig dispenses must be recorded in BloodNet.

1. To dispense a directly from a dispense request click on the *Dispense requests* link.

2. A list of dispense requests will appear on the page. You also have the option to search for a request by filling in the search fields. Once you have located the request you can click directly on the *Dispense* link. *Note:* The option to view the request and delete the request is also available.

- Once you have clicked on the dispense link you can then scan in the product number and enter the expected transfusion date and save the dispense episode.

Dispense date * dd/mm/yyyy

Dispense time * hh:mm (24 hour)

Dispense location requested: 5B

Dispense location:
